

IRISH CATTLE BREEDING FEDERATION

Evaluation of maternal cow traits and the complex nature of an overall female replacement index

Ross Evans, Thierry Pabiou, Andrew Cromie

Background

- 1.1 million suckler cows
- 10% pedigree registered
- 90% crossbred
 - I. 20% dairy-beef cross
 - II. 80% Natural service sires
- Low levels of weight recording
 - ✓ larger quantity of calving and carcass data
- Traditionally low levels of Sire recording in commercial herd (35% currently)

History of Genetic improvement

- **Pre 2005 – linear scoring on pedigrees (4 breeds, Muscle, Skeletal and docility)**
- **2005-2007: calving, carcass using commercial crossbred data**
- **2007: maternal traits: fertility & milk**
- **Single overall index (SBV) launched in 2007 for beef breeding (€value)**
- **2012: Terminal index (€)**
Maternal index (€)

Genetic Differences in the Sucker herd (PTAs)

	Index/trait	records in genetic evaluation	h2	PTA difference Btm 1% to Top 1%
Terminal traits	Calving Difficulty (% 3 & 4)	5,223,471	0.09	-14
	Gestation (days)	646,061	0.36	-6
	Mortality (%)	6,645,674	0.04	-2.3
	Docility (1-5 scale)	1,097,014	0.35	0.5
	Feed Intake (kg DMintake/day)	4,199	0.43	-1.3
	Carcass Weight (kg)	3,090,430	0.38	44
	Carcass Conformation (1-15 scale)	3,090,430	0.33	2.4
	Carcass Fat (1-15 scale)	3,090,430	0.30	1.9
Maternal cow traits	Daughter Age 1st Calving (days)	622,646	0.31	-58
	Daughter Calving Difficulty (%3 & 4)	629,783	0.02	-13
	Daughter Milk (kgs)	214,563	0.25	29
	Daughter Calving Interval (days)	1,870,468	0.02	-14
	Cow Survival (%)	750,087	0.02	7
	Cull Cow Carcass Weight (kgs)	210,138	0.29	67

Basis of Maternal index

Example: Maternal sire producing 100 calves

Breeding Decision to produce a replacement female is made at conception of the female and not at point of insemination of the female herself

50 progeny express slaughter traits (2 females not bred)

46 female progeny express cow traits: maternal calving, milk, fertility

161 grandprogeny (3.5 calves per cow) express Calving, Gestation & Mortality

DGEs account for multiple (lifetime) expression in replacement females and later generations

82 grand-progeny express slaughter traits

72 grand progeny express cow traits: maternal calving, milk, fertility

Maternal index

Genetic sd

Economic Value

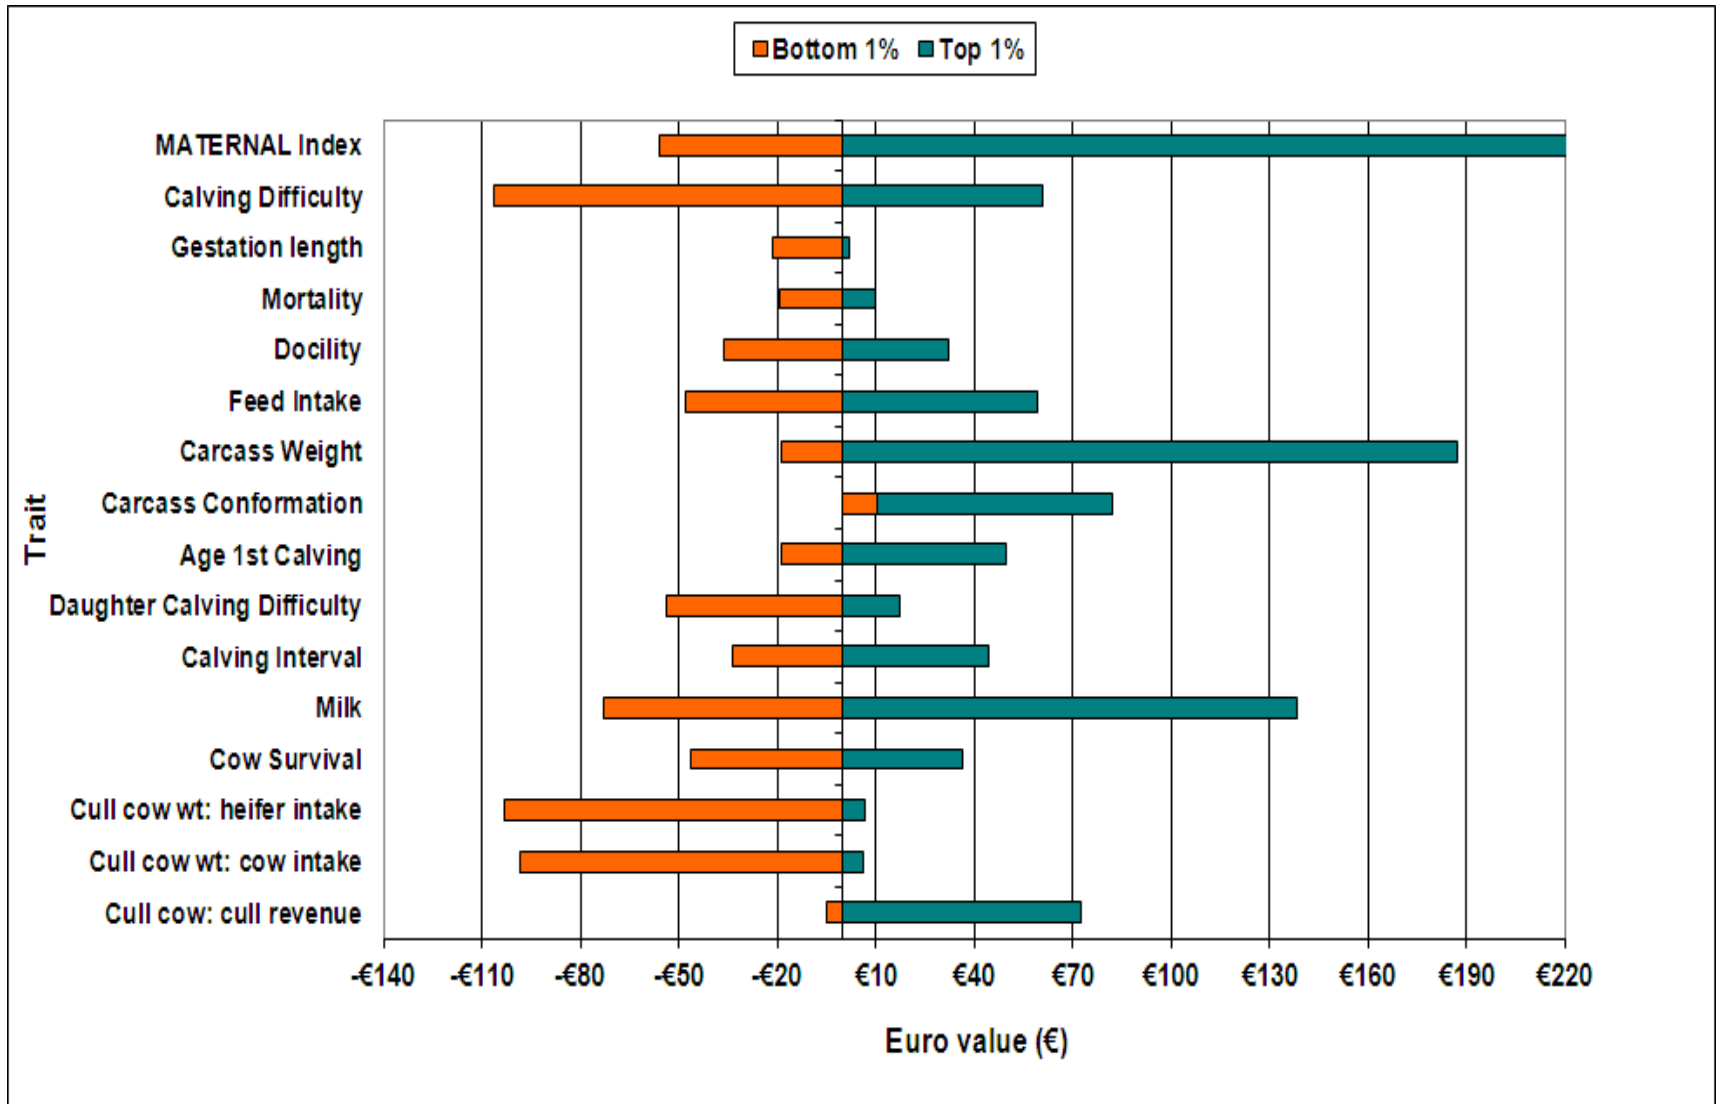

DGE

Trait type	Trait	Relative emphasis %
Calving traits	Calving difficulty (direct and maternal), gestation, mortality	19.7%
Docility	Weanling and cow docility	4.2%
Feed intake	Weanling, replacement heifer and cow intake	23.0%
Beef	Carcass weight, conformation and fat, cull cow carcass weight	23.7%
Milk	Daughter Milkability	12.4%
Fertility	Age 1st Calving, calving interval, survival	17.0%

Influence in the Maternal Index based on distribution of PTAs

Phenotypic performance of Suckler herds

2. Performance Statistics - relative to all beef herds in the database

Summary

- Strong genetic improvement in Terminal traits
- Evidence of adequate genetic variation in maternal cow traits
- Terminal trait selection has led to decline in maternal cow traits due to unfavourable relationship
- Maternal index recently launched but individual trait selection still important
